

## SolarVu Monitoring is a COVID Solution!

During a pandemic like this which we as a world are currently facing, it is important that essential businesses continue to operate to their full extent to help in the fight against this disease. Furthermore, we are reaching the peak of summer and the temperatures outside has been rising. Many of us now are working from home and need to utilize their air conditioning units to cool down their homes and businesses. Healthcare facilities and essential services depend on clean, electric power as we work through this.

It is important that your solar sites across your portfolio are always operating efficiently to generate power to support everyone's demand. **Solar monitoring plays a vital role with the fight against COVID to make sure solar farms are fully operating and generating throughout the day to their expected capacity to provide power to our front line workers.**

Let us know if your site is unmonitored, or even if you are not satisfied with your current monitoring system, and contact Cachelan to provide you an estimate **TODAY!** We can help you aggregate your portfolio into one view for easier management.

**Lets help our front line workers & continue the fight against COVID-19!**

### Technical support:

When you want to reach us for support, we recommend that you both send us an email and call our support lines:

Email: [techsupport@cachelan.com](mailto:techsupport@cachelan.com)  
Phone: 1.905.470.8400 ext 224  
Toll Free: 1.888.742.7765 ext 1

For Sales: [sales@cachelan.com](mailto:sales@cachelan.com)
